EDUCATION

University of Toronto

Honours BSc in Computer Science

Toronto, ON

Sep. 2022 - Apr. 2026

Coursework: Distributed Systems, Databases, Operating Systems, Machine Learning, Algorithms, Computer Networks

EXPERIENCE

Software Engineering Intern

Example Corp

May 2025 - Aug. 2025

Toronto, ON

- Built a Spring Boot service that tailors resumes to job descriptions using Gemini structured output, reducing application turnaround from 30 minutes to under 1 minute.
- Wrote a tested LaTeX escaper handling % & _ # \$ ~ ^ and Unicode quotes/dashes, surviving arbitrary LLM-generated text.
- Deployed on Render with a Docker image that pre-warms the tectonic package cache during build, cutting first-compile latency from 60s to under 2s.

PROJECTS

resume-pipeline – *Java, Spring Boot, React, Postgres, Gemini, tectonic*

2026 - Present

- Full-stack tool that ingests projects, generates bullet points via Gemini 2.5 Pro, ranks them against a pasted JD, and compiles a tailored resume PDF.
- Designed a two-pass LaTeX escaper using a sentinel-swap for backslashes so escape sequences don't cascade; 21 unit tests covering every special-char permutation.
- Deployed on Render + Neon + Vercel with Spring Security session cookies, Flyway-managed schema, and JSONB-stored bullet rankings with rationale.

TECHNICAL SKILLS

Languages: Java, TypeScript, Python, SQL, C++

Frameworks: Spring Boot, React, Next.js, Node.js, PyTorch

Databases & Tools: PostgreSQL, Redis, Docker, Git, GitHub Actions

Interests: Competitive Programming, Open Source, Chess
